PREFATORY NOTE

BY SENIOR MEDICAL OFFICER OF HEALTH.

The Annual Reports of the successive Medical Officers to the Privy Council and the Local Government Board of England, which have been issued in one way or another since 1858, form the most valuable body of literature extant for those engaged in Public Health Administration. The mere mention of the names of Sir John Simon, Dr. Seaton, Sir George Buchanan, and Dr. Thorne Thorne, who have in succession written those Reports and edited their voluminous Appendices, is a sufficient guarantee of their value. In the Appendices will be found a series of Departmental Reports which, in substance, are invaluable repertories of facts regarding the most important questions which come before the Medical Officer in the course of his daily work, and in form and method are models for those officials in their investigations. Various detached supplementary publications have also appeared from time to time, such as those "On Sewage Disposal," "On the Use and Influence of Hospitals for Infectious Disease," "Reports and Papers on Cholera," etc., etc.

An Index to these publications (Authors and Subjects) was prepared for the use of the Sanitary Department of Glasgow, on my suggestion, by Drs. Marsh and Irvine, while attached to me as Pupil-assistants, in 1894, and the Commissioners of Police resolved to print it primarily for the convenience of their own officials. They also resolved to publish a limited impression. In the Library of the Department there is a complete set of the Reports, but very few medical officers possess such a set. All, however, probably know where they can get convenient access to one, and the next best thing to having a set is to have an Index, guided by which, reference may be made to some convenient library.

JAS. B. RUSSELL.

SANITARY DEPARTMENT,

MEMORANDUM AS TO THE METHOD OF REFERENCE USED IN THE INDEX.

The matter included in the following Index was originally issued as follows:—

I.—The Annual Reports of the Medical Officer to the Privy Council (Mr. Simon), issued in thirteen yearly volumes from 1858 to 1870. These volumes contain the Annual Reports of the Medical Officer, with Appendices, and are referred to in the Index, e.g., thus:—

I., 1858, 150. The Roman figure refers to the series of the volumes, the date to the year covered by the report, and the subsequent figures to the page.

II.—Two Annual Reports of the Medical Officer of the Local Government Board (Mr. Simon), viz., for 1871 and 1872. These are incorporated in the first and second Reports of the Local Government Board for 1871-2 and 1872-3 respectively, and were not issued separately. These, and the appendices related to them, are referred to in the Index, e.g., thus:—

II., 1st, L.G.B., 1871-2, lii.—the third entry referring to the page.

III.—The Reports of the Medical Officer (Mr. Simon) of the Privy Council and Local Government Board, (New Series), issued in eight separate volumes, and consisting of the Annual Reports, with Appendices, for 1873-4-5, and five supplementary volumes.

These are referred to in the Index as follows—the date in brackets referring to the date of *publication*, and subsequent figures to pages:—

III., N.S., i., (1874), Annual Report for 1873, with Appendix.

III., N.S., ii., (1874), Supplementary Publication, 1874.

III., N.S., iii., (1874), Supplementary Publication, 1874.

III., N.S., iv., (1875), Annual Report for 1874, with Appendix.

III., N.S., v., (1875), Supplementary Publication, 1875.

III., N.S., vi., (1875), Supplementary Publication, 1875.

III., N.S., vii., (1876), Annual Report for 1875, with Appendix.

III., N.S., viii., (1876), Supplementary Publication, 1876.

IV.—The Annual Reports, with Appendices, of the Medical Officer of the Local Government Board, from 1876 onwards, issued yearly in separate volumes as Supplements to the Annual Reports of the Local Government Board. This system was instituted in 1876, and has been employed since. References to these volumes are as follows:—

IV., 1876, 1877, 1878, . . . &c.—the date referring to the year covered by the report, subsequent figures to pages.

For convenience of reference, the Index has been divided into two parts—an Index of Subjects and an Index of Contributors.

In the Index of Subjects, the literal titles of the papers have, in some cases, been modified, in order to secure what seemed the most natural arrangement and classification of the subject matter. Cross references have been freely used.

In the Index of Contributors, the contributions have been arranged chronologically under the names of the writers, the literal titles of the papers being, in each case, retained.

*** In addition to the material comprised in the above series of publications of the Medical Officer, several further reports have, from time to time, been issued by the Local Government Board, either as separate "Reports," or as additional "Supplements" to the annual reports, or as reprints of papers, originally included in the Appendices issued together with the Reports of the Medical Officer. The following list comprises the more important of these:—

Sewage Disposal. 1876.

Levantine Plague and Quarantine. Mr. J. N. Radcliffe. 1881.

Use and Influence of Hospitals for Infectious Diseases. 1882.

Effluvium Nuisances (a reprint of Dr. Ballard's First Report). 1882.

Sanitary Aspects of Emigration and Immigration. Dr. Blaxall. 1882. (Reprinted from Report for 1882.)

Manufacture of Rag Flock. Dr. Parsons. 1885. (Reprinted from Report for 1885.)

Reports and Papers on Cholera. 1886.

Back-to-Back Houses. Dr. Barry and Mr. P. Gordon Smith. 1887.

Report on Destruction of Town Refuse. T. Codrington, C.E. 1888.

Epidemic of Small-pox at Sheffield, 1887-1888. Dr. Barry. 1889. Causation of the Annual Mortality from Diarrhea. Dr. Ballard. Issued together with—

The Geographical Distribution of Diphtheria in England and Wales. Dr. Longstaff. 1889.

The Influenza Epidemic of 1889-90. Dr. Parsons. 1891.

Further Report on Epidemic Influenza, 1889-92. Dr. Parsons. 1893.

Enteric Fever in the Tees Valley. Dr. Barry. 1893.

These additional reports have been issued on a somewhat irregular system. They have not been indexed in the following pages, but references have been made to them in foot-notes appended to the entries relating to the same subjects.

Besides these, many minor papers and reports on local epidemics, and other matters concerned with sanitary administration, have been issued from time to time. These also have not been indexed. A list of those obtainable on sale may be had on application to Messrs. P. S. King & Son, Parliamentary Publishers, King Street, Westminster.

Two Reports to the Local Government Board under the Rivers Pollution Prevention Act, by Dr. Angus Smith, were issued in 1882 and 1884. The first deals with oxidation and aeration in water and sewage, the second with the examination of waters. A Report under the Rivers Pollution Prevention Act was also presented to the Secretary of State for Scotland by Mr. A. E. Fletcher in 1888.

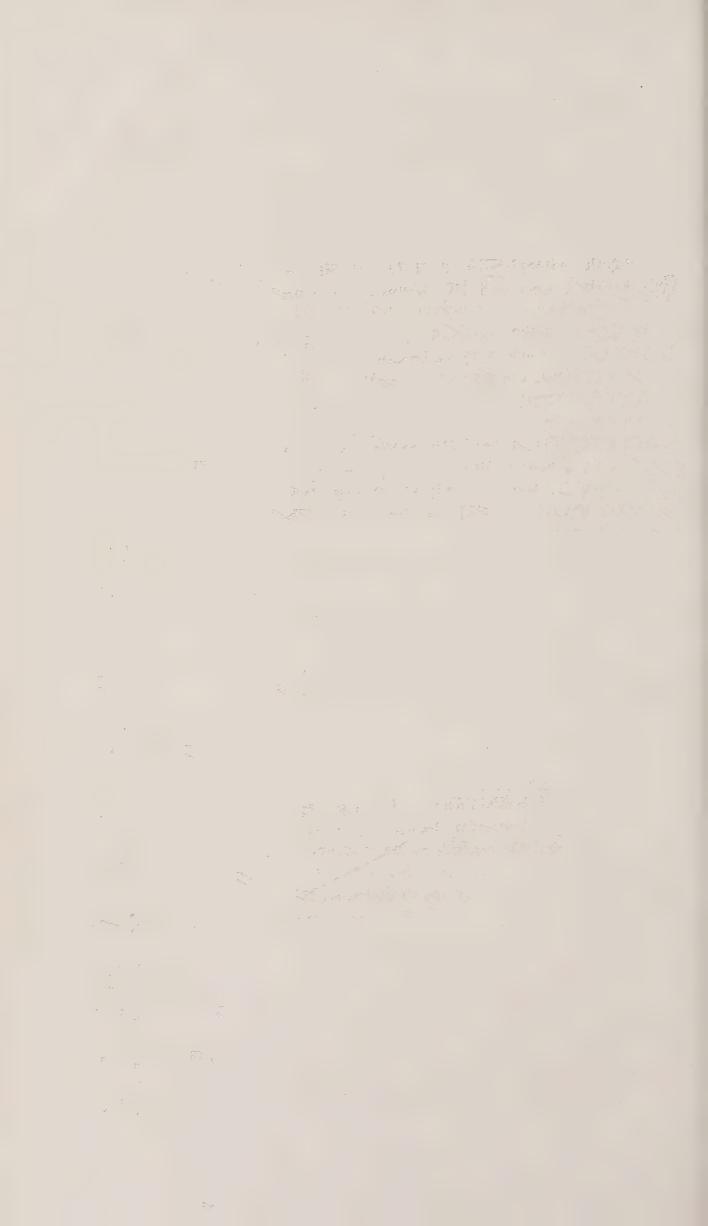

Professor Brown's "Report to the Privy Council on Eruptive Diseases of the Teats and Udders of Cows in relation to Scarlet Fever in Man," issued in 1888, contains investigations collateral to those carried on by the Medical Department of the Local Government Board, and issued as Appendices in the Reports of the Medical Officer.

^{*} A volume of Reports and Papers on Cholera was issued separately by the Medical Officer in 1886.

In addition to the introductory Report of the Medical Officer, it contains as Appendices:—

^{1.} Cholera in Europe during 1884 and 1885 (Dr. Thorne).

² and 3. Reports on, and Conclusions of, the International Sanitary Conferences at Constantinople, 1866; Vienna, 1874; and Rome, 1885.

^{4, 5,} and 6. Orders and Memoranda of the Local Government Board on Cholera.

^{7, 8,} and 9. Reports on the Results of the Sanitary Survey made in anticipation of Cholera, 1885-86.

^{10.} A Paper on the relation of Bacteria to Asiatic Cholera (Dr. Klein).
